

Environmental Management Statement

Beijing HyperStrong Technology Co., Ltd. (hereinafter referred to as "HyperStrong" or the "Company") holds a long-term vision and is well aware of the far-reaching impact of environmental protection on human society. By promoting green office, environmentally friendly technologies and energy management, we strive to operate our business in a more environmentally friendly manner and reduce the burden on the planet. At the same time, HyperStrong actively work with customers and partners to write a new chapter of sustainable development on the planet. In order to standardize the company's environmental management requirements and measures, this statement is formulated.

This statement is applicable to Beijing HyperStrong Technology Co., Ltd. and all branches and subsidiaries within the scope of the consolidated statements, and is applicable to the company's production and operation, products and services, logistics and distribution, waste management and other operational activities. It is applicable to all employees of the company, including regular employees, temporary workers, apprentices, student workers, contract workers and other types of staff at home and abroad, and

all partners are required to actively comply with this statement or similar policy requirements.

1. Improve the Environmental Management System

The Company has established an ESG Committee as the highest governance structure for overall management of sustainable development-related issues, responsible for decision-making and supervision of environmental management-related matters, and continuously tracking environmental management-related performance indicators. All factories under the company have special environmental management departments, which are under the unified leadership of the Beijing headquarters to ensure the consistency and efficiency of environmental management.

The Company strictly complies with the requirements of national and local environmental protection laws and regulations such as the “Environmental Protection Law of the Peoples Republic of China” and the “Ecological Environmental Protection Plan of Beijing during the 14th Five-Year Plan Period”, to builds and continuously improves the environmental management system to ensure that the environmental impact is controlled and reduced to the maximum extent in production and operation activities. At present, HyperStrong has established and improved the environmental management system according to ISO14001 standard, and have passed the

corresponding certification.

The Company regularly entrusts third-party organizations with professional qualifications to identify environmental risks. On the basis of accurate identification, in order to further standardize environmental management behavior, the company has formulated relevant environmental factor identification and evaluation control procedure documents, aiming at systematically and comprehensively identifying potential environmental influencing factors that may exist in the company's operation process, and evaluating them through scientific methods. On this basis, HyperStrong formulate targeted control measures to reduce environmental risks and ensure the company's sustainable development and harmonious coexistence with the ecological environment.

2. Implementation of environmental management measures

2.1 HyperStrong is committed to building a resource-saving organization and promoting the comprehensive green transformation of production and lifestyle. Through measures such as reducing energy consumption, managing waste, controlling noise and conserving resources, effective environmental management is achieved. The specific measures include but are not limited to:

Formulate relevant internal system documents such as waste and noise control management regulations, to conduct compliant disposal of waste and noise generated by the Company;

Carry out sound insulation and shock-proof treatment for equipment whose emission noise exceeds 80 decibels to ensure that the workshop noise meets the regulatory limits. At the same time, minimize the factory boundary noise and reduce the impact on the communities where the factory is located;

Build an efficient and environmentally friendly energy management system, set the overall policy of energy management as "energy conservation and consumption reduction, green development, technology leadership, sustainable development", and clarify the strategic objectives of energy management;

Practice green office, introduce advanced water-saving equipment, and clarify the management regulations on the use of production materials to achieve efficient utilization of various resources.

2.2 Regularly educate and train employees on resource conservation and environmental protection to enhance employees environmental awareness.

2.3 Use green environmental indicators to screen and audit suppliers to promote the green development of suppliers.

2.4 Continuously monitor and evaluate environmental protection performance to ensure the efficiency and sustainability of environmental management.

3. Addressing climate change

The Company identifies and evaluates climate change-related risks and opportunities with reference to the analysis framework on climate-related risks and opportunities proposed by the Climate-related Financial Information Disclosure Working Group.

According to the standards and guidelines, the company gradually builds and improves the carbon emission management system, takes a number of measures to reduce carbon emissions, promotes renewable energy and purchases green electricity to increase the proportion of green electricity usage, declares and organizes carbon neutrality certification.
